Compliance

FTS provides expert compliance support. FTS offers a staff specialized in Federal and State environmental regulation interpretation, and in permit preparation and renewal.

Federal, state, and local regulations require certain facilities to establish and implement contingency plans to prevent and control potential leaks or spills of materials harmful to humans or the environment. These plans include Preparedness, Prevention, and Contingency (PPC) plans for large quantity generators of hazardous waste, Spill Prevention, Control, and Countermeasure (SPCC) plans for facilities that store or use oil, and Stormwater Pollution Prevention (SWPP) plans for stormwater discharges.

FTS Compliance Specialists

FTS can prepare and implement contingency plans for various facilities to

meet regulatory requirements and provide peace of mind for clients. FTS assists clients through completion of permit applications and renewals, follow-up reviews, and issuance of final permits. FTS can then assist clients with sampling, inspections, and other requirements as needed to ensure compliance with permit conditions. Types of permits include:

- Industrial water discharge
- Stormwater discharge
- RCRA Part B
- Air permits associated with remedial activities

FTS can perform routine site inspections and maintenance, maintain on-site filing requirements and record-keeping, and provide reporting to comply with regulatory requirements.

Permitting

FTS routinely prepares permit applications and permit renewal applications under RCRA and NPDES programs and will keep you in compliance with the inspections, monitoring, maintenance, on-site filing, and reporting requirements of these permits.
